To Our Friends and Customers

SIXTY-TWO years ago the Burpee Seed business started on little Church Street in Philadelphia. In a few years, as gardeners in all parts of the world learned that Burpee's Seeds Grow and are the Best That Grow, our business started to grow. It has continued to increase year after year so that, thanks to you and other gardeners, we are, today, the largest direct-by-mail Seed House in the world. Your confidence in us is our most valued possession. We will do everything possible to merit your continued patronage.

Burpee's Contributions to Horticulture

It is a pleasure to know that our painstaking efforts to create new and better varieties are crowned with such success that the name of Burpee has become inseparably linked with the best and latest in both flowers and vegetables.

Some of the most famous vegetables in the world, such as Golden Bantam Sweet Corn, Burpee's Stringless Green-Pod Bush Bean, Fordhook Bush Lima Bean, were first introduced by Burpee and have enriched the gardens of America.

In recent years Double Nasturtiums and Marigolds with odorless foliage have added to the fame of Burpee's Seeds. Last year, the horticultural world was startled by the introduction of our new Collarette Marigold, "Crown of Gold," the first Marigold in cultivation with odorless foliage. It was the All-America Gold Medal Winner.

This year we offer many new flowers—new Marigolds with odorless foliage, new Carnation-flowered Marigolds, new French Marigold Flaming Fire, new Early Sunshine Marigold. Our new Salmon Supreme Petunia is the only bedding Petunia of a salmon color and the Winner of the Highest Award in the All-America Selections for 1938. Our new Orange Fantasy Calendula is outstanding for form and color; the Winner of the Highest Award of Merit for Calendulas in the All-America Selections for 1938.

In our Experimental Gardens we have created many wonderful new varieties; all are marvelous, startling transformations of the old favorite vegetables and flowers. It is our purpose to continue our leadership in the introduction of new and better varieties so that you will have the newest and best in your garden.

BURPEE'S FAMOUS SEED FARMS

More than 200 acres are planted to Sweet Peas every year for seed production at Floradale. Besides Sweet Peas, there are acres upon acres of other kinds of flowers at Floradale.

Fordhook Farms

"Fordhook" long ago became a well-known and well-loved name among gardeners everywhere, for many of the famous Burpee introductions are named for the great Fordhook Farms—the original Burpee Seed Farms—located at Doylestown, near Philadelphia.

At Fordhook, many special strains of vegetables and flowers are produced. Here also are the largest and most complete Trial or Proving grounds in the world. Every variety of seed that we sell is tested for purity and vitality. In addition, we try out hundreds of varieties from foreign countries, making careful comparisons, and by hybridization and selection we are constantly improving the Quality of existing varieties and creating new ones. This vast amount of experimental work goes on year in and year out at Fordhook, as well as at Floradale Farms, so that the Best varieties and the Best Seeds that Grow can be offered to Burpee customers.

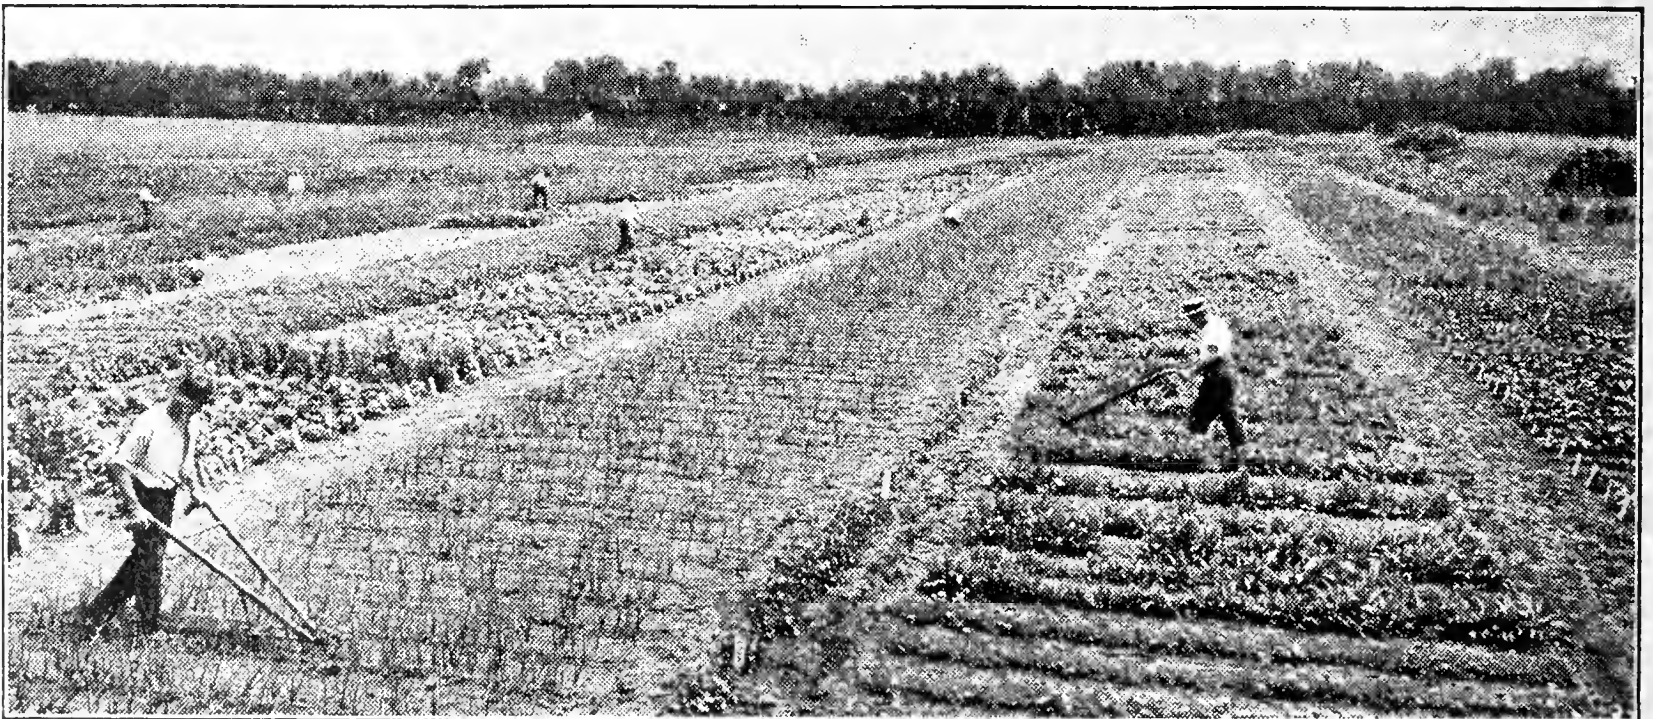

David Burpee examining the new Tip Top Calendula on our Floradale Seed Farms.

Floradale Farms

With its hundreds of acres of flowers, spreading out in a glorious panorama, Floradale Farms has been appropriately called, "The California Home of Flowers." Like Fordhook, Floradale has given its name to many flowers which Burpee has originated.

Floradale Farms are located in the Lompoc Valley, California—60 miles north of Santa Barbara. Seeds grown here have exceptional vigor, high vitality, and hardiness which assure sturdy growth and successful blooming wherever grown. Mild winters and long, cool summers are especially favorable for growing flower seeds. Plants have a long growing season and mature their seed during the dry, cool summer and fall; the seed maturity is not hurried—it matures leisurely into the biggest, plumpest seeds it is possible to grow. Experimental work as well as seed growing is continually going on at Floradale; we are proud of the many new and valuable varieties we have originated on Floradale Farms.

At Fordhook Farms, thousands of tests are made annually of both Flowers and Vegetables to assure Burpee customers the Highest Quality and Highest Vitality Seeds—the Best Seeds that Grow.

New Marigolds with Odorless Foliage

ALL ORIGINATED BY BURPEE ON OUR FLORADALE FARMS

Last year we introduced Collarette Marigold "Crown of Gold"—the first Marigold with entirely odorless foliage. This year we are offering **Yellow Crown** and **King's Ransom**, each with flower form like Crown of Gold and entirely odorless foliage. Another Burpee creation this year is **Burpee Gold Marigold**: large, orange, Carnation-like flowers and without the Marigold foliage odor.

2293 Yellow Crown

The form of Yellow Crown is, like Crown of Gold, of the Collarette or Crown type, with a circle of broad rays on the outside (called the collar) and a crest or crown in the center which is made up of many artistically curled and interlaced florets resembling miniature Chrysanthemums. Both the collar and crown are of a clean, refreshing, cheerful shade of bright canary-yellow. Flowers $2\frac{1}{2}$ in. across; plants 20 in. tall. Early and continuous blooming until frost. Odorless foliage.

Pkt. (100 seeds) 25¢;
200 seeds 50¢; 500 seeds \$1.00.

2292 King's Ransom

The same distinctive, artistic flowers as Crown of Gold; collar is a little less conspicuous and crown slightly larger. Glowing, bright golden orange, a delightful tone midway between Crown of Gold and Yellow Crown. Flowers $2\frac{1}{2}$ to 3 in. across; plants 2 ft. tall. Early and continuous blooming. The foliage is absolutely odorless.

Pkt. (100 seeds) 25¢;
200 seeds 50¢; 500 seeds \$1.00.

Now that Burpee has developed Marigolds with odorless foliage, they have become most popular for dinner table decoration.

2199 Crown of Gold

All-America Gold Medal Winner of 1937

The first Marigold in cultivation with odorless foliage. This freedom from the usual Marigold odor and distinctly new Collarette or Crown form made Crown of Gold the most outstanding flower last year—more packets of seeds of it were planted last season than of any other new flower ever introduced. Flowers are sweetly fragrant, brilliant orange-gold, $2\frac{1}{2}$ in. across, produced early and freely until frost. 2 ft. tall.

Pkt. (200 seeds) 10¢; $\frac{1}{8}$ oz. 25¢; $\frac{1}{2}$ oz. \$1.00.

2294 Burpee Gold

Odorless Foliage; Carnation-like Flowers

(For color illustration, see front cover)

Here is a truly wonderful Marigold; earlier blooming, larger flowered, dwarfer growing and more floriferous than Guinea Gold, and, above all, entirely free of the usual Marigold foliage odor. Glorious deep orange double blooms, $3\frac{1}{2}$ in. across, with the long petals loosely and artistically arranged. Flowers have unusual substance, making them most desirable for cutting, and as the foliage is entirely odorless, Burpee Gold Marigold is unsurpassed for indoor decoration. Plants grow $2\frac{1}{2}$ ft. tall, begin blooming in 15 weeks, and continue most profusely until frost.

Pkt. (30 seeds) 10¢;
100 seeds 25¢; 200 seeds 50¢; 500 seeds \$1.00.

NEW AND SPECIAL MARIGOLDS

Flaming Fire

2283 Flaming Fire

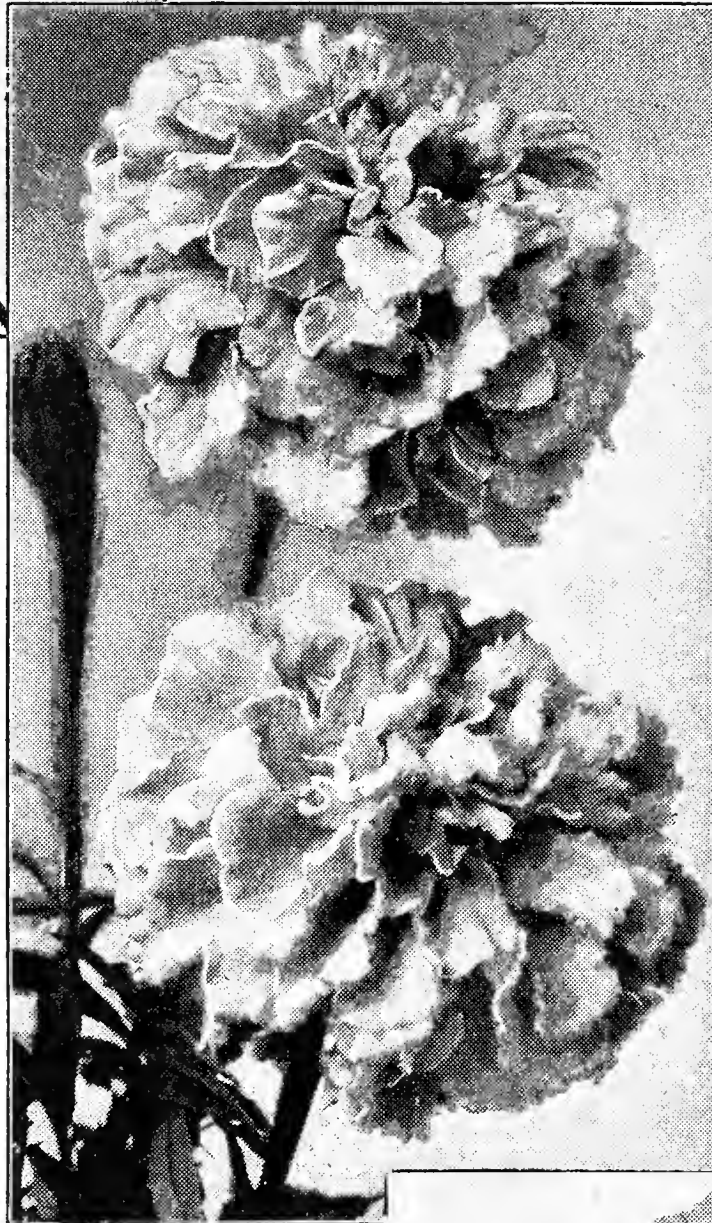

A Burpee creation in the Tall Single French class. The long-stemmed, brightly colored, large single flowers, 2 in. across, vary in color at different seasons; at times they are flaming red and at other times they are of many patterns of red and yellow. The variations in color, even in different flowers on the same plant at the same time, are inherited and constitute what is known as a variegation. The variance in coloring from day to day resembles the restless and ever-changing colors of a flame as it consumes a burning log, hence the name "Flaming Fire." Plants grow 2½ ft. tall and begin to bloom in about 12 weeks, continuing to flower profusely until hard frost. **Pkt. 25¢; 1/8 oz. 65¢; 1/4 oz. \$1.25.**

For general list of Marigolds, see pages 40 and 41; for odorless Marigolds, see previous page.

2295 Golden West

(Pictured in color on front cover)

Here is a Marigold with many things to commend it over Guinea Gold; it is earlier blooming, larger flowered, dwarfier growing and more floriferous. Average time required from the time seed is sown until plants start to bloom is 15 weeks. Flowers grow 3½ in. and more across, with petals loosely and gracefully placed. Plants grow 2½ ft. tall, and as they branch freely from near the base, the stems are quite long and borne so profusely that the plants are literally covered with flowers. Absolute uniformity characterizes Golden West. All the plants come into bloom at the same time; they all have exactly the same size, shape and habit. Much like Burpee Gold Marigold except that Golden West has foliage with the usual Marigold odor. Created by Burpee after five years of careful breeding and selection. Its earliness will be especially appreciated in sections where growing seasons are short. Long-keeping cut flower. **Pkt. (30 seeds) 10¢; 100 seeds 25¢; 200 seeds 50¢; 500 seeds \$1.00.**

Golden West

2298 Sunset Giants

About half the plants in this mixture will produce the largest Marigolds ever grown; 5 in. is average; they do grow larger. Shades of orange and yellow with orange predominating. Foliage has the heavy Marigold odor. Plants grow 3½ ft. or more tall. The flowers vary somewhat in formation. Striking. **Pkt. 10¢; 1/8 oz. 35¢; 1/4 oz. 60¢.**

2296 Sunbeam

Best described as a yellow Guinea Gold. Flowers are about 3 in. across, of the Carnation-flowered type, with many loosely placed, broad furrowed petals of a bright, pleasing yellow color. Plants grow 2 to 2½ ft. tall and are free flowering. **Pkt. 15¢; 1/8 oz. 45¢; 1/4 oz. 75¢.**

2277 Tom Thumb, Golden Crown

Dwarf or Tom Thumb form of the popular Guinea Gold; plants grow about 10 in. high. Flowers are large, golden orange, and borne profusely above the lush green, fine leaved foliage. Especially suited for borders or bedding; nice for short-stemmed cut flowers. **Pkt. 25¢; 2 pkts. 45¢; 5 pkts. \$1.00.**

2297 Early Sunshine

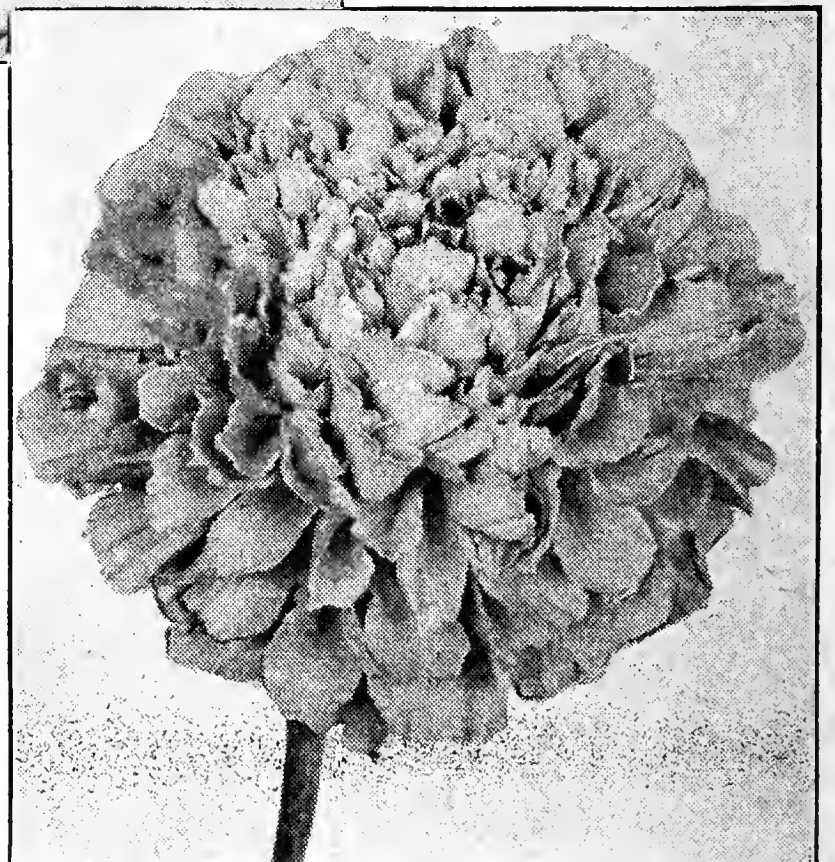

Burpee origination. Flowers have the same attractive form as Dixie Sunshine, resembling small Chrysanthemums with their curled and interlaced florets but they are considerably larger, growing 2½ in. across and 1½ in. deep, and best of all, they are extremely early. Blooms are had in 15 weeks from the time the seed is sown, so that even in the most northern states where summers are short, Early Sunshine will provide great numbers of flowers for many weeks. Plants grow 2 ft. tall and produce their cheerful, bright lemon-yellow flowers most profusely. Ideal for cutting. Showy in the garden.

Pkt. (25 seeds) 50¢; 2 pkts. 95¢; 5 pkts. \$2.25.

2282 "Supreme" Mixed

New colors of Yellow Supreme in mixture; included are Orange Supreme, Golden Supreme, Primrose Supreme and other shades, some of which are varying tones of the famous Yellow Supreme. Flowers are large, 4 to 5 in. across; petals loosely arranged and frilled, giving the flowers the appearance of a Peony. Plants grow 2½ ft. tall, begin to bloom in August, continuing until frost. A Burpee origination.

Pkt. 25¢; 1/8 oz. 60¢; 1/4 oz. \$1.00.

The New
Odorless

MARIGOLDS

of BURPEE ORIGATION

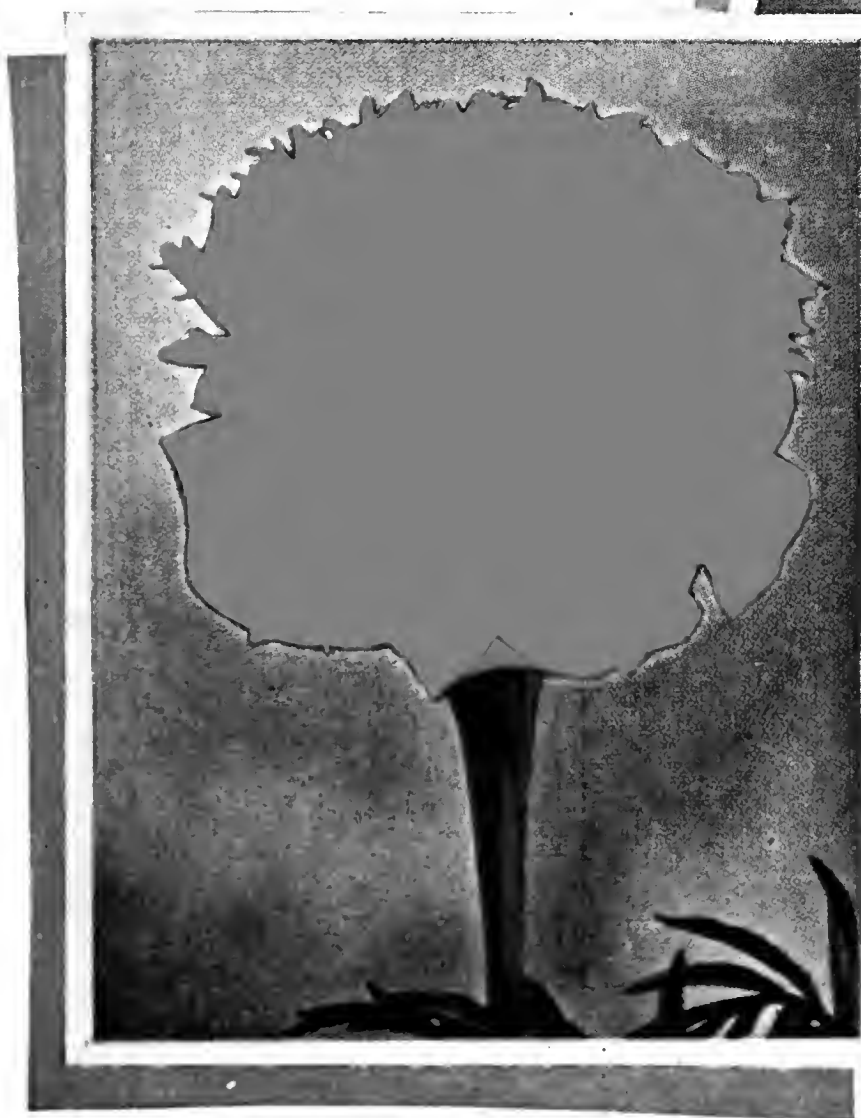

"CROWN OF GOLD," introduced by us last year, is the first Marigold in cultivation with entirely odorless foliage. The elimination of odor from the foliage was one of the greatest improvements in Marigolds since the development of doubles some 300 years ago. "Crown of Gold" swept the country by storm; gardeners wanted other colors. We expected this and are glad to be able to offer two new varieties this year—King's Ransom and Yellow Crown; both make fine companions to the lovely Collarette Crown of Gold. All are early blooming and bloom all summer. The foliage is odorless.

Yellow Crown

Crown of Gold

2293 Yellow Crown

Petunias

BURPEE'S GLORIOUS ASTERS

A continuous display of Asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early Asters, we suggest that you have seedlings of later flowering Asters or other flowers coming along to take the place of the Earlies when they are through blooming.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine and ample moisture. Asters bloom from three to five months after seed is sown, varying according to type and climate. For early blooms sow seed indoors in boxes or pans six weeks before outdoor planting time.

Varities marked with an asterisk (*) are the new Wilt-Resistant Strains. If you have had poor results with Asters through attacks of "Wilt disease" or "Stem-rot," we suggest that you try those marked *.

Royal or Early Branching

An early, large-blooming type of Aster with elegant, well-rounded, double flowers on very long stems. The broad petals are medium-long, gracefully curving inward, except for the centermost petals, which usually form an attractive whorl. Royal Asters come into bloom when the "Queen of the Market" are at their best. 2 ft.

Super Giant Asters

1598 Los Angeles Wonderful Aster, somewhat similar in form to the Giants of California, but earlier and much larger, with an unusual curling and interlacing of the petals. Probably the largest of all Asters.

Giant Double Nasturtiums

Dwarf or Globe Type

Orange Glory

The plants of Burpee's Dwarf Double Nasturtiums are of compact, bush or globular form, about 1 ft. high. The gorgeous, giant double and semi-double, sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, borders, rock gardens and pot culture.

Two New Varieties for 1938

From Burpee's Floradale Seed Farms

2305 Orange Glory

A truly glorious Double Nasturtium and a most desirable addition to the Dwarf or Globe type. The large, sweet-scented flowers are bright orange; the base of each of the upper petals and most of the inside of the throat are painted with deep garnet-brown. Narrow lines of this latter color radiate like a fan out over the upper petals, but disappear in an overlay of orange-chrome. Petals are wonderfully fluted and crinkled, which adds considerably to the charm and beauty of the lovely flowers. Plants are of the true dwarf or bush form.

Pkt. 25¢; 3 pkts. 60¢; oz. \$1.50.

2306 Delightful

Most pleasing shade of soft salmon-cerise, the upper petals prettily marked crimson-maroon at the base and as flowers age often take on a deeper shade of salmon-cerise than the lower petals. The form of the flowers is most graceful and their size quite large, often measuring 3 in. across. Unsurpassed for cutting as the stems are exceedingly long and strong; flowers are held well above the luxuriant, bright green foliage of the neat, well rounded, dwarf plants. Particularly showy; very free flowering and delightfully sweet-scented.

Pkt. 25¢; 3 pkts. 60¢; oz. \$1.50.

2329 Golden Globe

Exquisite, giant double and semi-double, pure golden yellow fragrant blooms of the same color and shape as Golden Gleam, but the plants are dwarf, globe-shaped and bushy. Award of Merit in the All-America Selections, 1936.

Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00.

2346 Mahogany Gem

The darkest colored Nasturtium we have ever seen; the velvety, brilliant flowers are rich, deep mahogany. Plants are very compact and dwarf; flowers are large, double and sweet-scented.

Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.

2348 Primrose Gem

The dwarf, compact plants are literally covered with giant double, sweet-scented, soft primrose colored flowers. Bushy, uniform, globe-shaped little mounds above which the flowers are borne on long, strong stems.

Pkt. 35¢; 3 pkts. \$1.00; oz. \$1.75.

2347 Ruby Gem

Dwarf, compact, globe-shaped plants literally covered with large, double, sweet-scented, bright ruby colored flowers. Most floriferous, providing plenty of long-stemmed flowers for cutting.

Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.

2327 Scarlet Globe

Perfect compact plants of uniform, globe-shaped growth, about 1 ft. tall, bearing giant double and semi-double, sweet-scented, fiery scarlet blooms in great profusion. Plants in our field have borne as many as 100 blooms at one time.

Pkt. 25¢; 2 pkts. 40¢; oz. 75¢.

2330 Burpee's Dwarf Giants

A colorful mixture in beautiful shades, ranging from creamy white through yellow, rose, salmon, salmon-pink, orange, cerise, scarlet, blood-red, crimson and mahogany to deep maroon, including many interesting color combinations.

Pkt. 15¢; oz. 35¢; 4 ozs. \$1.00.

Giant Double Nasturtiums

Semi-Dwarf or Gleam Type

Few flowers ever introduced have been acclaimed so quickly and praised so highly as Double Nasturtiums. The popular Golden Gleam was the first, and now we have varieties that represent all the best colors to be had in Nasturtiums. Flowers are large, exquisitely sweet-scented, double and semi-double; plants are semi-dwarf.

2345 Apricot Quite large and very sweet-scented double flowers of primrose overlaid with a soft salmon pink suffusion combining into a most pleasing shade of light apricot. Profuse blooming.
Pkt. 20¢; 3 pkts. 50¢; oz. \$1.00.

2320 Caprice Primrose and salmon-cerise blotched, streaked or mottled in various degrees, often changing considerably in different flowers on the same plant. The combination of these two colors is most striking. Very large, double flowers. Pkt. 20¢; 3 pkts. 50¢; oz. \$1.00.

2328 Golden Gleam Beautiful, rich golden yellow, sweet-scented, long-stemmed flowers, 2½ to 3 in. across, are borne well above the foliage. Pkt. 10¢; oz. 20¢; 4 ozs. 60¢.

2332 Gleam Hybrids Large double and semi-double, sweet-scented blooms on long stems. A wide range of colors from the very lightest (almost white) to the darkest mahogany. While most flowers are of solid colors, some have showy markings of contrasting colors. Pkt. 10¢; oz. 20¢; 4 ozs. 60¢.

2334 Burpee's Miracle Nasturtium Mixture

Burpee's Double and Super-Double Mixed

These New Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of Burpee's Miracle Mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, others will be Super-Double. Burpee's Super-Double Nasturtiums (*Tropaeolum majus Burpeeii*), when fully open, resemble greenhouse Carnations.

Plants are vigorous and produce an abundance of large, sweet-scented flowers, 3 in. across. The Super-doubles have as many as 40 to 60 true petals, whereas single Nasturtiums have only 5, and double hybrids, 8 to 10. The extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of the Super-double type. Stems are thicker and the plants sturdier and more vigorous than other Nasturtiums.

Burpee's Super-Double is the only Nasturtium to be given a Plant Patent. Plants grown from our Miracle Mixture seed are protected by U. S. Plant Patent No. 141.

Packet of 10 seeds for \$1.50;
3 packets for \$4.00.

Giant Hyacinth-Flowered Larkspur, Royalty

Improved Larkspur

One of the most beautiful and desirable **annuals** for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is beautiful.

The culture of Annual Larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better, but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 1 1/2 ft. apart.

Giant Ruffled Petunias

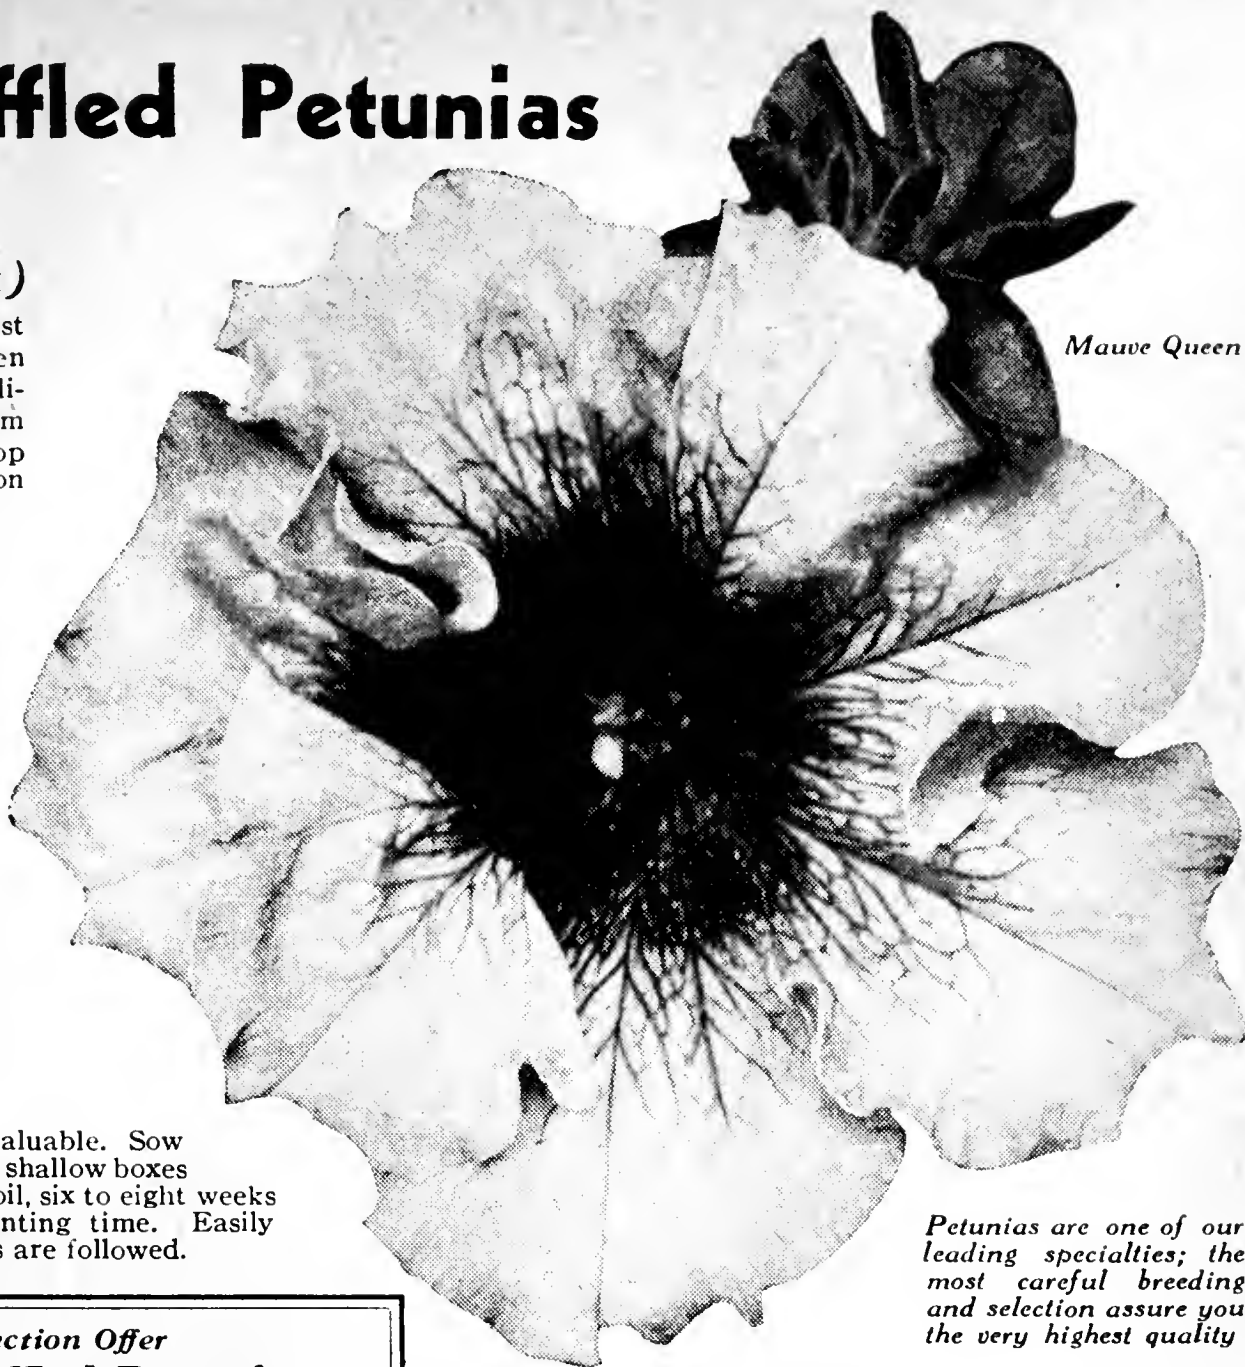

(*Petunia hybrida grandiflora superbissima*)

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting. The freedom with which the charming blooms are produced throughout the growing season is truly amazing.

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, cutting, and pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined, and, when well grown, often measure 5 to 7 in. across. They are marvelous in every respect.

Seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes filled with well prepared, rich soil, six to eight weeks before your usual outdoor planting time. Easily grown if directions on packages are followed.

Burpee's Snapdragons

"Majestic" Day Dream

Snapdragons (botanically Antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

This gives a double appearance to the large, waved and ruffled flowers which makes them so distinct. They are greatly admired wherever seen and have won the highest honors in the keenest competition.

*Burpee's New
Giant Ruffled
Sweet Pea
Sparkle*

3554 Sparkle (New)

A long-sought-for color in Ruffled Sweet Peas, one that is luminous and sparkling, lively and pleasing. A gay, glad color, best described as glowing cerise, evenly spread over the standard and wings, varying only in tone in the lights and shadows created by the rufflings.

A bouquet or bunch of "Sparkle" is very bright and warm, yet not fiery or harsh. Much of the brilliance is due to the intense ruffling and a slight, hardly noticeable, but harmonious orange suffusion which adds so much to the liveliness of this outstanding Sweet Pea. Not the least of "Sparkle's" many attributes is its lovely fragrance. Flowers are large, duplexed, beautifully ruffled, frilled and waved.

Pkt. (25 seeds) 25¢; 1/2 oz. \$1.35; oz. \$2.25.

3598 Giant Ruffled Mixed Colors

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 49 to 53. They are especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North, and also valuable for winter flowering under glass. They are being planted more and more every year.

If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

Burpee's Sweet Peas are famous the world over as the "Best That Grow." The flowers are extra large, of perfect form and texture, well placed on long strong stems, and usually produced in sprays of four.

We have marked with a star (*) the varieties that we particularly like in each color class; if you are in doubt as to which to choose, make your selection from those thus marked. All are lovely and each has its own merits; you would not make a mistake in planting any of them.

Year in and year out, we are continuously working to improve existing varieties and to create new ones. This year we are offering two new early varieties—**Baltimore** (cerise) and **Burpee's Orange Improved**. Be sure to try them.

Burpee's Famous Zinnias

The value of Zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties.

Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut.

After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart, smaller flowered types, 1 ft. Zinnias will bloom in about two months. All are easy to grow.

7551 Zinnia Garden

Cupid Zinnias are ideal for cutting

New Cupid Zinnias The Smallest of All

Compact plants, about 1 ft. tall, consist of a large number of slender branches which give the plant a well-rounded, bushy habit. Each of the numerous upright stems bears a miniature flower which hardly exceeds 1 in. in diameter. Plants are very floriferous; a mass of color through the summer and fall. They are as easy to grow as any Zinnias.

Cupid Zinnias are especially adapted for borders, bedding and rock gardens, and as a miniature cut flower. The long, slender stems, usually free from lateral branches, are ideal for cutting and may be used alone, as pictured above, or with long-stemmed flowers as well as with the short-stemmed small flowers ordinarily used in miniature vases.

PERENNIAL FLOWER SEEDS

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed" will be sent **free** upon request.

Average heights and blooming season are given in the descriptions for each class; some variation is natural in different localities.

Campanulas are most useful and beautiful subjects for the garden; the dwarf forms are especially fine for edgings and rock gardens. All are of easy culture and succeed in any good, well-drained soil. The medium single, double, and Cup-and-Saucer varieties, popularly known as Canterbury Bells, are **biennials**. They bloom the second year from seed, then die. For a continuous display, seed of these should be sown every year. The perennial varieties are quite hardy, lasting for many years.

Dahlia Roots

Jersey's Beauty

Each year on our Fordhook Farms we try out hundreds of varieties of Dahlias and select those that are the best growers, freest bloomers and which we recommend as the best for you to plant. All are listed here with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, the attractive Miniatures or the small Pompon varieties, you will be delighted with the results. We supply **strong root divisions** from field-grown clumps. We pay postage.

The American Dahlia Society has adopted a classification for all Dahlias, according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative;
C = Cactus; S. C. = Semi-Cactus.

Lettuce, New York No. 515

Lettuce

New York No. 515

526 A little earlier than New York No. 12, which it resembles in general appearance. The large heads are solid, bright green in color, bleaching to a beautiful white; always crisp, juicy and sweet. New York No. 515 has been bred for resistance to tipburn and will stand hot weather better than all others of the New York type. Should you have had difficulty in raising head Lettuce in your garden, we would suggest trying this new strain. **Pkt. 10¢; oz. 25¢;**
4 ozs. 75¢; 1/2 lb. \$1.15; lb. \$2.00;
2 lbs. \$3.70; 5 lbs. \$9.00.

Leek—Elephant

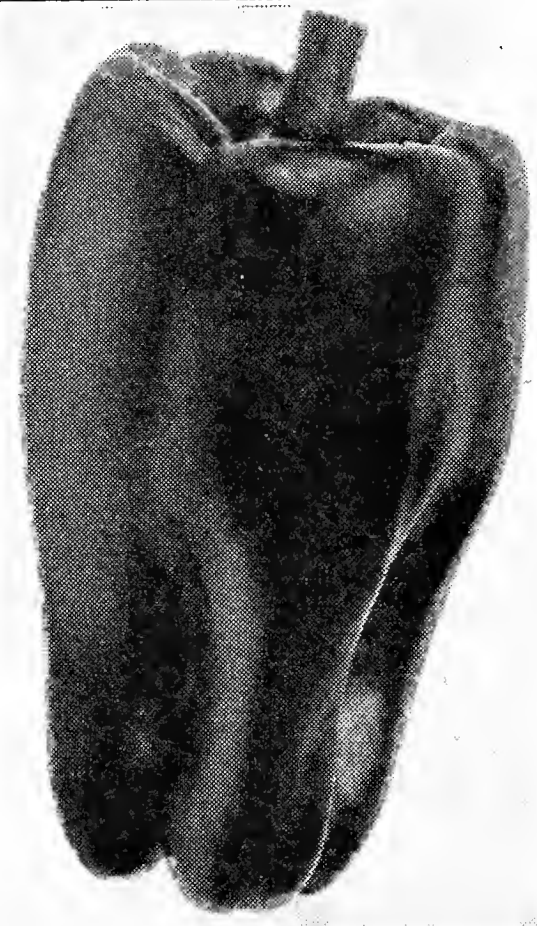

462 Great improvement over other Leeks. Stalks are pearly white, large and thick, with the white parts extending farther up the stalk than any other variety. Of excellent quality, being much sweeter than any other Leek grown. All lovers of this grand vegetable should include it in their garden. Belongs to the Onion family but has a decidedly sweet flavor. Excellent for soups, stews or creamed. **Pkt. 10¢;**

Tomato—Grothen's Globe

The globe-shaped fruits are larger than those of Break O'Day and are of a deeper scarlet color and free from the yellow shade about the stem end. This yellow cast in Break O'Day is disliked by some growers; it is not to be found in Grothen's Globe. Flesh is very solid and meaty. Vines are heavy croppers; ten tons of fruit per acre is not an unusual yield. **Pkt. 10¢; 1/2 oz. 25¢; oz. 40¢;**
4 ozs. \$1.25; 1/2 lb. \$2.35; lb. \$4.25.

Turnip—Tokyo Market

1170 Tokyo Market is largely grown for market where a bunch Turnip is wanted. Roots are pure white and are mostly used when about 1 1/2 in. across and 1 in. in depth, but when fully grown they reach 3 in. or over in diameter. The solid white flesh is tender and very sweet. In addition to its value for market, it is a most desirable white Turnip for the home garden either in early spring or for a fall or winter crop. **Pkt. 10¢; oz. 15¢; 4 ozs. 25¢; 1/2 lb. 35¢;**

Pod*

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before they have reached full size, and the plants will continue bearing much longer. They will be ready to use in from 47 to 70 days, depending on variety. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks up to August 10. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pound of seed sown thinly fills a row 150 to 200 ft. long; usually 90 lbs. of seed are sown per acre.

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the Bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 65 to 75 days. Sow seed when the weather has warmed up, about the second week of May in vicinity of Philadelphia, and not later than June 15. Set poles 4 ft. apart and place 8 to 10 beans around each pole; 1 lb. of seed for 125 poles. When plants are well established, thin to 2 or 3 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed.

72 Kentucky Wonder or Old Homestead ☉

We prefer this to most other green-podded Pole Beans. It is early, climbs well, and bears a heavy crop of large, green, curved pods, 7 to 9 in. long. They are thick and meaty, tender, brittle, and of good quality, showing slight strings as the pods reach full size. Though thick, they appear slender on account of their great length. Pods are borne in clusters and are produced over a long season if picked as they become ready for use.

BUSH LIMA BEANS

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders, maturing in from 65 to 78 days, according to the variety. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in rows $2\frac{1}{2}$ to 3 ft. apart, and cover 2 in. deep with fine soil. Later thin to stand 15 to 18 in. apart in the rows. One pound will sow 150 ft. of row. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size.

65 Burpee's Fordhook Bush Lima

*Introduced by Burpee and named for
Burpee's Fordhook Farms*

Burpee's Fordhook Bush Lima Bean is known and grown wherever Beans are planted. It is a Burpee introduction that vies with Burpee's Improved Bush Lima for first place in quality and popularity. Burpee's Fordhook Bush Lima is in a class by itself, and is altogether unique. Nothing like it has ever been grown. It is a bush type of the popular "Potato" Lima; strong and erect and never prostrate or running. The stalks that produce the blossoms are thrown out from the lateral and main stalks, and the pods are borne in "clusters" of from 4 to 8 each. The individual pods are 4 to $5\frac{1}{2}$ in. long, $1\frac{1}{4}$ in. wide, and as much as $\frac{3}{4}$ in. thick. Each pod holds 4 or 5 large, plump beans. The flavor of Fordhook is delicious, not unlike chestnuts. The plants grow 20 to 30 in. tall and make a spread of almost 2 ft. The foliage is of heavy texture and very dark green in color. On our own Seed Farms we grow enormous quantities of this Bean which we ship to our customers in every state in the Union. Plant Burpee's Seeds for best results. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 80¢; 5 lbs. \$1.45; 10 lbs. or more @ 27¢ per lb.**

64 McCrea Bush Lima

Genuine Baby Fordhook

The Baby Fordhook, which is just what we have been waiting for. To give an idea of the size of the beans themselves—the Fordhooks listed on this page are so large that 22 seeds will weigh one ounce. The McCrea is so small that it takes 70 seeds to weigh one ounce. While the seed itself is small, the plant is nearly as large as the original Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved and contain from 3 to 5 plump green beans of true Potato type. Although the pods are small, the unusually delicious flavor of this Baby Lima has already made it a popular favorite with home gardeners and canners. **Pkt. 10¢; $\frac{1}{2}$ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$1.65; 10 lbs. or more @ 30¢ per lb.**

*Another World Famous
Burpee Introduction*

A wonderful improvement over the original Burpee Bush Lima—larger pods, bigger beans, greater yield, and fully 8 days earlier. The pods are enormous, borne profusely in clusters of from 5 to 8, and crowded with four or five appetizing beans. Burpee's Improved Bush Lima is the largest podded and most prolific of the Bush Limas. The pods are 5 to 6 in. long; $1\frac{1}{4}$ in. wide. Even when fully matured, the beans are of luscious flavor. The plants make a uniform, vigorous, upright growth, with heavy foliage. The blossom-bearing stalks are thrown well out from the foliage; plants grow 30 in. high and 24 in. across the top. Beans mature in about 75 days.

Lima Beans

POLE LIMA BEANS

Pole Lima Beans greatly outyield the bush varieties per square foot of garden, but they require poles or other supports, and mature considerably later. Place 6 to 8 seeds edgewise, with the eye downward, around each pole, which are set 4 ft. apart each way. Later thin to 2 or 3 plants to a pole. One pound of large-seeded varieties for 75 poles. Do not plant until ground is thoroughly warm. Small plantings may be made along a fence or trellis.

TABLE BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best Beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth.

Use one oz. of seed for 100 ft. of row; 4 to 6 lbs. for an acre. The early varieties mature in 48 to 55 days; the midseason and late varieties require 60 to 70 days.

YELLOWS-RESISTANT CABBAGE

"Yellows-resistant" strains were introduced by the Wisconsin Agricultural Experimental Station so that Cabbages could be grown in localities where infected "Cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following varieties.

CHINESE OR CELERY CABBAGE

Not a true Cabbage; resembles Cos Lettuce somewhat. May be served like lettuce, or, when shredded, makes a delicious cole slaw. Boiled, it is far more palatable than ordinary Cabbage. Where summers are cool, seed may be sown in spring, but in the vicinity of Philadelphia, seeds sown early in August have proved to give the best results. Makes full-size heads in about 70 days after sowing.

Deserves to be largely planted, as it is an early and sure-heading Chinese Cabbage, growing 18 to 20 in. tall and about 3½ to 4 in. thick. The firm, well-blanching, white heads taper near the top. Leaves are broad, smooth and fringed at the edges. For market and roadside sales, Chihli is extensively grown, for the large, attractive heads sell readily. Very profitable crop for it is planted after some of the early ripening vegetables have matured. Every gardener should try Chinese Cabbage. Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; lb. \$2.00; 2 lbs. \$3.70.

BRUSSELS SPROUTS

More delicate in flavor than Cabbage. Sow the seed thinly in rows early in June and transplant to rows 3 to 4 ft. apart in the garden or field. When the sprouts begin to form, remove the lower leaves to force all nourishment sent to the lower stem into the sprouts. The flavor and quality of the sprouts are greatly improved by frost. One oz. of seed sows 500 ft. of row. Requires 125 days to mature.

162 Burpee's Danish Prize ⊙ Strong-growing, robust variety of large, solid, round sprouts set thickly on nearly the entire length of the tall stems. Sprouts all mature at about the same time. Pkt. 10¢; oz. 25¢; 4 ozs. 75¢; ½ lb. \$1.15; lb. \$2.00.

CAULIFLOWER

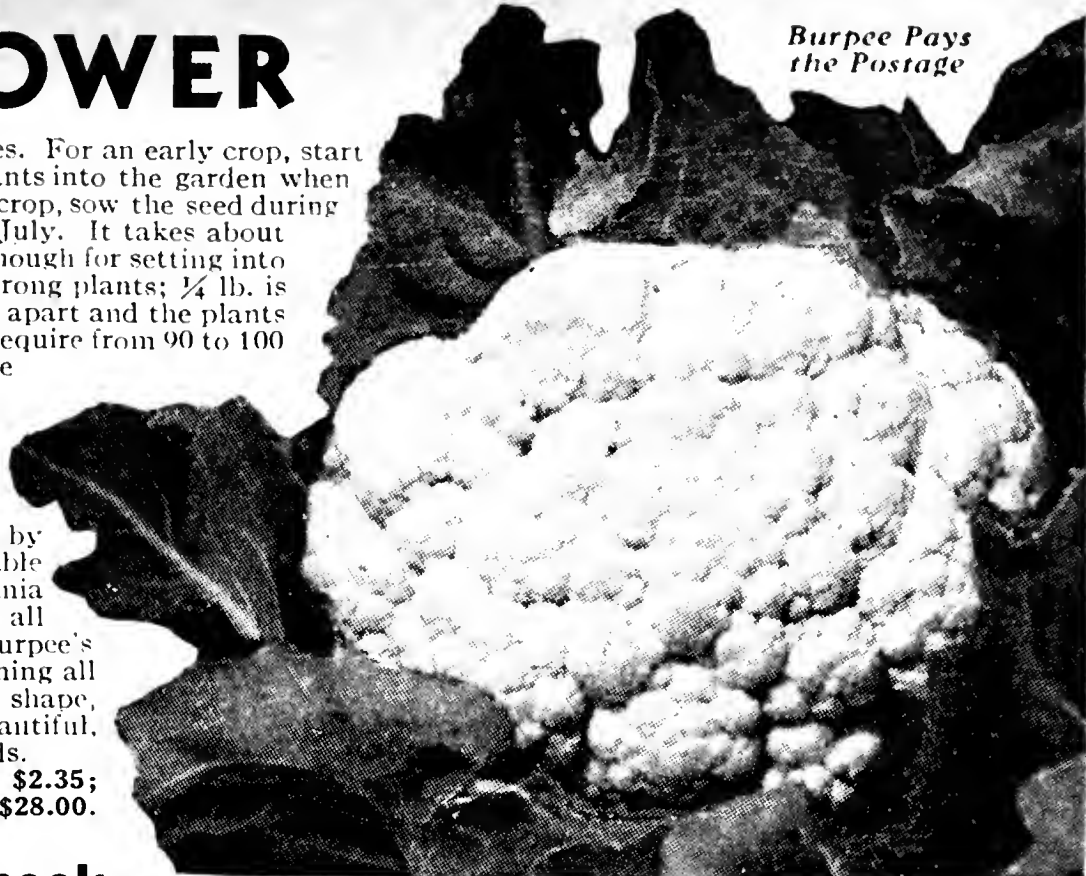

Cauliflower is one of our choicest vegetables. For an early crop, start the seed indoors during March and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed during June and set plants out the latter part of July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One oz. will give 1000 to 1500 strong plants; ¼ lb. is required for one acre, placing the rows 3 ft. apart and the plants 2 ft. apart in the rows. Early (E) varieties require from 90 to 100 days to mature; late (L) varieties require over 130 days.

253 Burpeeana ⊙

(E) This is **Super Snowball** as offered by Burpee. It stands out as the most valuable Cauliflower. In tests of the Pennsylvania State College it appeared as the best of all strains, maturing almost as early as Burpee's Fordhook. It is early, with the heads forming all at one time, showing a uniformity of size, shape, and type that is truly astonishing. Beautiful, round, pure white heads with smooth curds.

246 Burpee's Fordhook

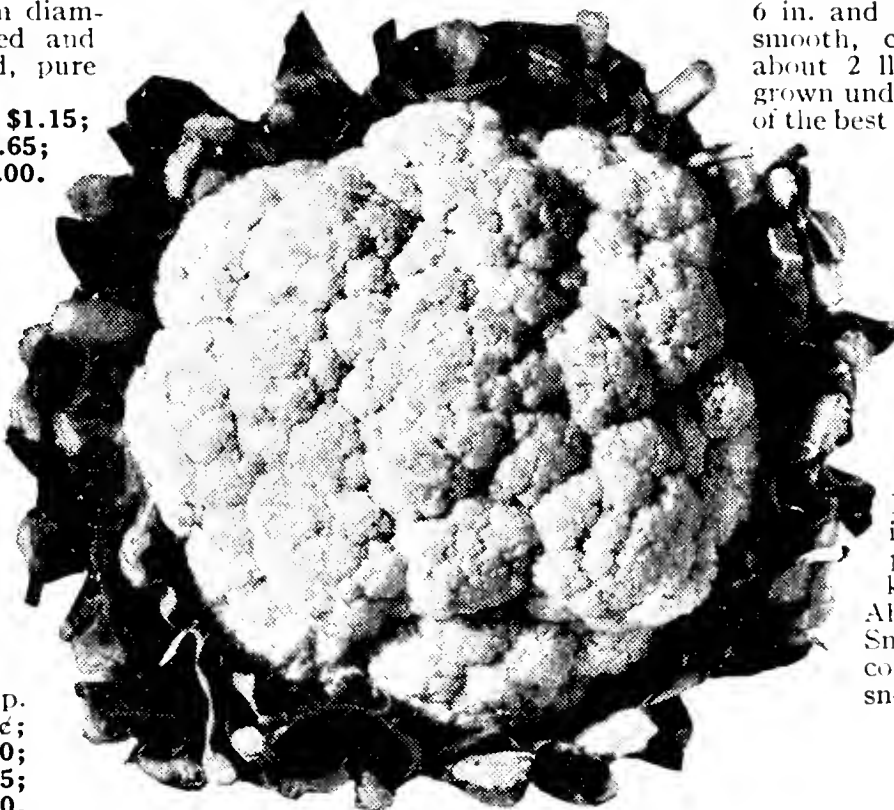

(E) The earliest of all Cauliflowers we have ever grown. The fact that we named this Fordhook is ample proof of our high esteem for it. Will produce good-sized heads even under unfavorable conditions when most other varieties fail to give a satisfactory crop. Plants are dwarf and compact, yet the heads measure fully 6 in. in diameter. They are well-rounded and have a fine, closely formed, pure white curd.

(E) Of strong growth, with erect, pointed, dark green leaves growing closely about the heads. Grown in good soil, the snow-white heads of extra-fine quality measure 8 to 10 in. across, and mature extra early. It is an excellent market and home garden variety and should be sown so that the heads will mature during either early summer or late fall. Can always be depended upon to produce a heavy crop.

Burpee's Ideal Snowball

255 Burpee's Ideal Snowball ⊙

(E) We claim this new Cauliflower is well named, as it is ideal in every way. Perhaps its outstanding merit is the large leaves which completely enfold the head and keep it pure white at all times. About 5 days later than Early Snowball. Plants are dwarf and compact; heads large, solid and snow-white. Grown everywhere.

245 Burpee's Dry Weather ⊙

(E) Though Cauliflower does best in a cool and moist season, in "Dry Weather" we have a variety which is actually drought-resistant and will produce heads when other varieties are a complete failure due to lack of moisture. In addition to this most valuable feature, it is a Cauliflower of the highest quality, producing large, pure white heads only a week later than Burpee's Best Early. The heads are considerably larger than those of that famous variety, and are surrounded by more foliage. Individual heads weigh 2 lbs. each. Though it grows well in dry seasons, it also will do well in moist or wet seasons. A quality Cauliflower in all respects.

CARROTS

Sow seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest Carrots. Cultivate throughout the season to insure smooth straight roots. For winter storing, sow about the middle of June which will make full size roots before cold weather sets in. One ounce of Carrot seed will sow 250 ft. of drill. 3 lbs. of seed are required to drill one acre. The early varieties mature in 60 to 65 days after sowing; midseason varieties require 65 to 75 days and the late varieties 75 to 85 days.

Golden Plume Celery

CELERY

For the earliest crop, start the seed in a hotbed or in the house during February or March. For the fall or main crop, sow the seed in the open ground as early in the spring as the soil can be worked into good condition. Plants will be ready for setting in rows in July. Celery requires a rich, well-manured soil and plenty of moisture so that it can make a continuous growth. Soil, boards, or Celery paper may be used to blanch the stalks. One oz. of seed is sufficient for 600 ft. of row. One oz. sown in the seed-flat gives 8,000 to 10,000 good strong plants; 2 ozs. are needed for planting one acre.

The early (E) varieties of Celery mature in about 115 days from the time the seed is sown. The late (L) Celeries need 130 days to come to maturity.

268 Golden Plume

(E) Also called **Wonderful**, a name that is most appropriate for this splendid early Celery. Some gardeners consider it the best early Celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a thick, full, creamy heart; stalks blanch readily. Fine for home and market garden. **Pkt. 10¢; ½ oz. 30¢; oz. 55¢; 4 ozs. \$1.65; ½ lb. \$3.00; lb. \$5.50.**

270 French Special Golden Plume

(E) An unusually thick-set, compact Celery, a week earlier than Golden Self-Blanching, has no soft stalks, and is free from strings. The rib is 9 to 10 in. to the first joint. Being solid and firm, it is less liable to damage by heat or cold. Plants are medium size and stocky. The full-hearted, thick, solid stalks blanch readily and are of the finest table quality. **Pkt. 25¢; ½ oz. 70¢; oz. \$1.20; 4 ozs. \$3.60; ½ lb. \$6.60; lb. \$12.00.**

276 Utah or Golden Crisp

(L) An excellent green Celery for fall use or winter storing. Matures about 10 days earlier than Giant Pascal. Plants are compact, stalks broad and thick, exceptionally solid, and when blanched are pure white, crisp, and of delicious nutty flavor. **Pkt. 10¢; ½ oz. 35¢; oz. 60¢; 4 ozs. \$1.80; ½ lb. \$3.30; lb. \$6.00.**

272 Burpee's Fordhook ☉ The Finest Flavored Celery

(L) Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a tender full heart in the center. They are extremely thick, measuring over 1/2 in. in diameter. Always tender, crisp, without strings, and juicy. Fordhook Celery will keep in perfect condition throughout the winter. If you grow only one Celery, try Fordhook: Pkt. 25¢; 1/2 oz. 35¢; oz. 60¢; 4 ozs. \$1.85; 1/2 lb. \$3.45; lb. \$6.25.

266 White Plume

(E) The earliest and the most easily blanched Celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. Valuable for fall and early winter use. Pkt. 10¢; 1/2 oz. 20¢; oz. 30¢; 4 ozs. 90¢; 1/2 lb. \$1.40; lb. \$2.50.

280 Florida Golden

(E) A newer variety that has some of the good qualities of both Golden Plume and Golden Self-Blanching. We do not know of any type of Celery that has been more of a favorite than Florida Golden. It has the long first joint and long full heart so much desired, and stands cold weather well without developing soft stalks. The heart is a light golden color. About two weeks later than Golden Plume, but earlier than Golden Self-Blanching. Pkt. 15¢; 1/2 oz. 45¢; oz. 80¢; 4 ozs. \$2.40; 1/2 lb. \$4.40; lb. \$8.00.

267 Easy Blanching

(L) A second-early Celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra-fine flavor. Hardier than Golden Self-Blanching. Pkt. 10¢; 1/2 oz. 25¢; oz. 40¢; 4 ozs. \$1.15; 1/2 lb. \$1.90; lb. \$3.50.

275 Winter Queen

(L) One of the finest dwarf winter Celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make large bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts.

262 Burpee's Golden Self-Blanching ☉ Selected French-Grown Seed Original Dwarf Strain

(E) The plants make a compact dwarf growth and form thick, solid, heavily ribbed stalks which blanch easily into a beautiful clear waxen yellow color. The quality of this variety is superb. The stalks and heart are crisp, solid, heavy, free from any strings, and of the most delicious flavor. It is a standard market and shipping variety, growing 14 to 18 in. tall. Imported seed grown specially for us in France.

It exhibits all the excellent qualities of the original, and is sown extensively by home gardeners as well as by market growers. The plants are heavy and solid. The heart is large, tender, firm, and has a delightful nutty, crisp, and juicy flavor.

CELERIAC or Turnip-Rooted Celery

293 Giant Prague

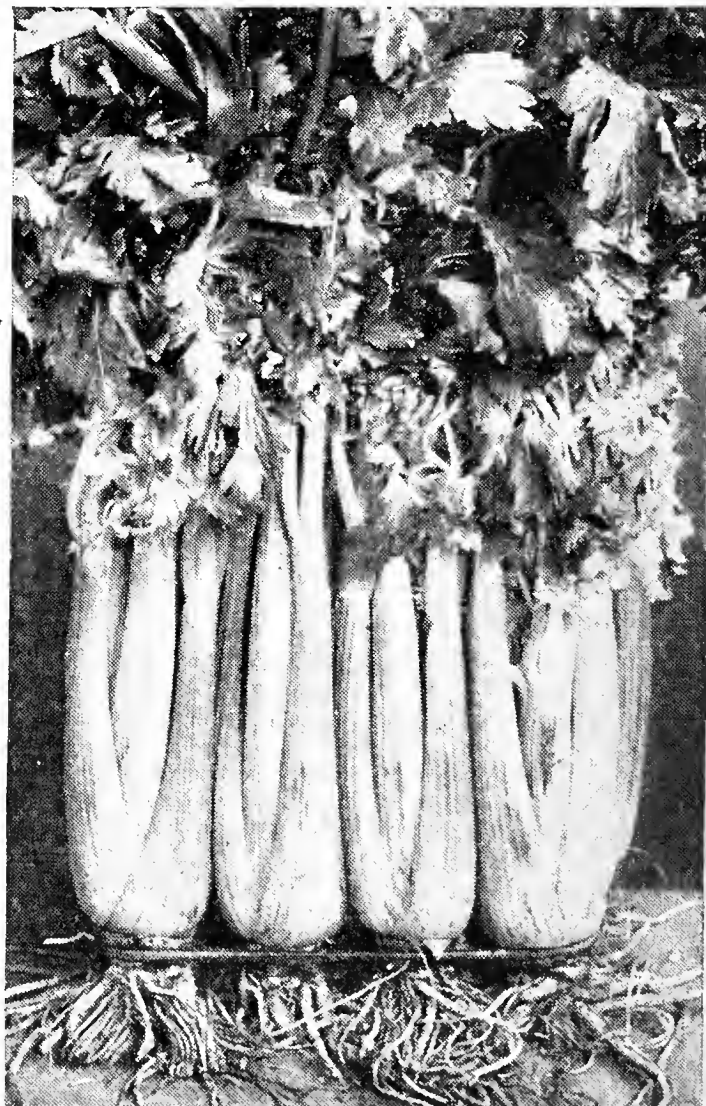

The edible portion is the large thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil which is fairly rich in barnyard manure. Frequent cultivation and occasional thorough watering are necessary. Start the seed in boxes indoors, and when the seedlings are large enough to be handled, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderate size. Does not require blanching.

Pkt. 10¢; 1/2 oz. 20¢;
oz. 30¢; 4 ozs. 85¢; 1/2 lb. \$1.25; lb. \$2.25.

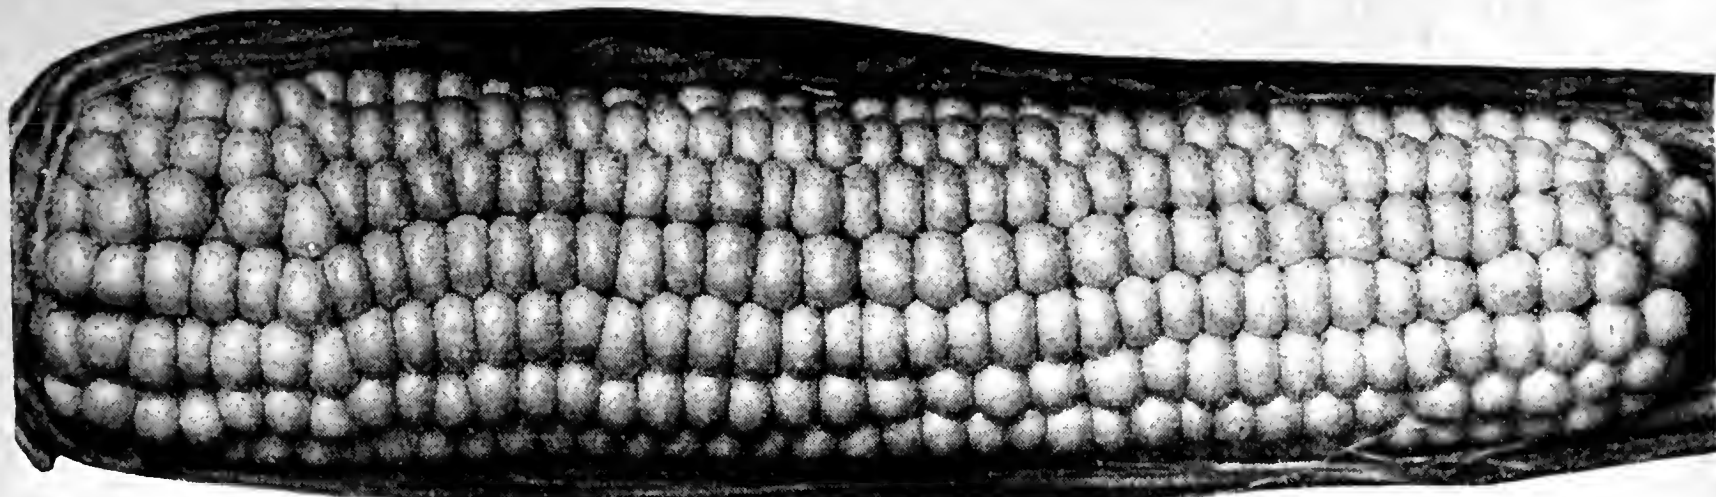

282 Giant Pascal ☉

(L) Considered by many the standard winter Celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months.

SWEET CORN

Sweet Corn is one of the most satisfactory vegetables for the home garden and one of the most profitable for the market gardener. There are few gardens in which space cannot be found for at least a few rows of Sweet Corn. No other vegetable is so healthful, appetizing and luscious as freshly harvested and quickly cooked Sweet Corn. Plant the seed, after all danger of frost has passed, in rows 2 to 4 ft. apart, and space the seed 3 to 4 in. apart in the row; or plant in hills 3 to 4 ft. apart. Cover with 1 to 2 in. of fine soil. For a continuous supply, sow varieties which will mature in succession, and also make succession sowings every 10 to 14 days up to July 10. One lb. of seed spaced by hand will give 500 ft. of row; 10 lbs. are needed to plant one acre. The extra-early (EE) varieties of Sweet Corn mature in 72 to 80 days. The early (E) varieties mature in 82 to 84 days. The midseason (M) varieties require 85 to 90 days, and the late (L) varieties 95 days.

306 The Burpee ☉

(EE) An outstanding early, yellow Sweet Corn that is not only larger than the famous Burpee's Golden Bantam but matures fully 10 days earlier. A big attractive ear, 7 in. long, closely set with 12 rows of kernels. Ears are not very thick—a good size for eating from the cob. Kernels are large, broad, deep, rich golden yellow, full of sweetness and nourishment, with the same buttery flavor that has given world fame to Burpee's Golden Bantam. The very fact that we have named this most delicious and tasty Sweet Corn, "The Burpee," is surely proof of the high regard in which we hold it. Gardeners everywhere praise it highly; its earliness, large size, high yield and superior quality have made it a favorite. Stalks grow 5 to 6½ ft. tall and, as a rule, each produces two ears. Pkt. 15¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. \$1.55; 10 lbs. or more @ 29¢ per lb.

326 Golden Sunshine

(EE) The ears are 7 in. long and closely set with 12 to 14 rows of attractive golden yellow kernels. Stalks grow 4½ to 5 ft., many carrying two ears. 341 Gill's Early Golden Market

(EE) Most outstanding development of the yellow kernel type. It is a fine Corn, indeed, with ears 7 in. long, containing 12 or 14 rows of large, sweet, creamy yellow kernels. Stalks grow 4 to 5 ft. tall. Matures a week ahead of Golden Bantam. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 65¢; 5 lbs. \$1.20; 10 lbs. or more @ 21¢ per lb.

320 Marcross 39 (New)

(E) An early Wilt-Resistant yellow hybrid top cross Sweet Corn, producing deep golden yellow kernels 5 days earlier than Golden Bantam. The ears are 6 to 7 in. long with 12 to 14 rows of large sweet kernels. Grows 5 to 6 ft. high with ears placed well up on the strong stalks, making it easy to pick. Should prove very popular with both the market and home gardeners, especially so in sections where the wilt disease makes it impossible to grow any Sweet Corn. Pkt. 15¢; ½ lb. 30¢; lb. 50¢; 2 lbs. 90¢; 5 lbs. \$1.90; 10 lbs. or more @ 35¢ per lb.

Whether grown for home or market, it cannot be excelled. Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 65¢; 5 lbs. \$1.20; 10 lbs. or more @ 21¢ per lb.

316 Burpee's Delicious ©

Stalks make a strong and vigorous growth, 5 to 7 ft. tall. Under average culture each stalk carries two fine ears close to 8 in. in length with 12 to 14 rows of pearly white, deep grains which are of a lusciously sweet flavor.

Stalks grow 6 ft. tall, which is important to the gardener who is interested in having a crop of fodder as well as extra-early ears. Under favorable conditions you can have corn on your table by the 4th of July. Particularly valuable to growers and truckers who wish to benefit from the high prices obtained by being first in the market. Home gardeners also find it valuable on account of its earliness.

The kernels are arranged neatly in straight rows which give them a particularly attractive appearance and make it easy to eat from the cob. The kernels are deep and contain a large quantity of delicious sweet pulp beneath the thin tender skin. A great favorite for the home garden and is a leading market growers' variety, in fact, ever since we introduced it years ago, it has steadily grown in popularity. The fine quality of this variety, maturing as it does so early in the season, is a real treat.

BUTTERHEAD VARIETIES

These grow to good size and develop solid heads of good form, resembling a small Cabbage in appearance. The heart is tightly folded and blanches to a light golden or buttery yellow. Excellent for succession sowings.

LOOSEHEAD OR CUTTING LETTUCE

Grand Rapids

These do not form solidly folded heads, but where the plants are grown singly at a suitable distance apart, they make a large, round, thick bunch of leaves which are blanched to a light green or creamy yellow in the center of the plant. The leaves are heavily curled or crumpled, attractive in appearance, and of delightful crispness and mild flavor. They are splendid to provide an extra-early supply of delicious salad, for when just a few inches tall, the thinnings may be used for the table. They are fine also for growing in the greenhouse during winter.

485 Grand Rapids Ⓞ

Strictly non-heading, with fringed and curled leaves. Used extensively for forcing in the greenhouse during winter, but is not less valuable for growing outdoors during the spring, summer, and fall. Thick sowing will give an abundance of young tender leaves very early in the season, but if the plants are spaced 12 to 18 in. apart each way, they will produce immense round masses of tender, juicy, delicious leaves. Pkt. 10¢; oz. 15¢; 4 ozs. 45¢; ½ lb. 65¢; lb. \$1.10; 2 lbs. \$2.00; 5 lbs. \$4.80.

490 Early Curled Simpson

Also known as Silesia or White-Seeded Simpson. The large plants have very light green, frilled and crumpled leaves. Forms a compact bunch of crisp brittle leaves of excellent flavor. ONIONS

The soil best suited to grow a good crop of Onions is one that is reasonably fertile, well-drained, and well prepared. Sow seed as early in the spring as the ground can be worked; space rows 1 to 1½ ft. apart. Cover the seed lightly, and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the Onions are harvested. One oz. of seed will give 200 ft. of drill; 4 to 5 lbs. are required for one acre. Onions require from 90 to 120 days to come to maturity.

GARDEN PEAS

Every home garden can easily produce enough Peas to supply the table for many weeks. For a continuous supply of this delicious vegetable, sow the hardier smooth-seeded Peas as early in the spring as the ground can be prepared. Follow them with the wrinkled-seeded sorts when all danger of frost has passed. Besides sowing at the beginning of the season varieties which will mature one after another, also make succession sowings at intervals of 10 to 14 days up to about June 1. Peas prefer cool, moist, loamy soil. Cover the seed 1 to 2 in. deep. Provide supports for the tall-growing varieties. One lb. of seed will sow 120 ft. of single row. In drills, 100 to 150 lbs. are required to plant one acre. The extra-early (EE) Peas mature in 54 to 58 days; the early (E) varieties require 60 to 62 days; the second-early or main crop (M) varieties need 68 to 76 days before they are ready.

RADISHES

If your garden includes some of each of the three different classes of Radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. Sow seed (except summer and winter varieties) as early as the ground can be worked, and make succession plantings every 10 days. Where the summers are hot, sow until the middle of May, then stop, but make three more sowings during August. Sow the seed thinly in shallow drills and cover with about ¼ in. of fine soil. The quality of Radishes depends considerably upon thorough soil preparation, good fertility, and ample moisture. One oz. is sufficient for 100 ft. of drill; 8 to 10 lbs. of seed are needed to sow one acre planted in drills.

Summer Radishes require a longer season to mature than the spring Radishes. They are adapted for sowing early in the spring to mature during the summer; or they may be planted later to be ready for the table any time before frost. In hot, dry weather Radishes are apt to become pithy, owing to slow growth. For a continuous supply sow every 2 weeks until September.

Nobel

SPINACH

Grow plenty of Spinach. It is one of the wholesome greens. Start your first sowing early in the spring, as soon as the ground can be prepared; make succession sowings every 10 days until the middle of June. For a fall crop sow from August 1 to 15. In the south, sow in September or October for wintering over. One oz. for 100 ft. of drill; 10 to 12 lbs. per acre. Matures in 35 to 50 days; New Zealand requires about 70 days.

1000 Nobel ©

New variety of the Viroflay type, but quite superior to it. It is one of the heaviest producers of all, with thick, dark green leaves that are huge in size, rather smooth and quite succulent. Very crisp, tender, of extremely delicious flavor. In spite of the fact that Nobel is an extra quick grower, it stands well before bolting to seed. Pkt. 5¢; oz. 10¢; 4 ozs. 20¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 70¢; 5 lbs. \$1.60; 10 lbs. \$3.00.

May be used for early spring sowings but is better adapted for sowing in the late fall for an early spring crop.

TOMATOES

Tomatoes are to be found in every garden. They are easily grown and can be used in so many different ways. It is well to grow an early as well as a main-crop, whether they are for home use or market. The main-crop is, of course, the most desirable for canning.

The early varieties (E) mature in 85 to 95 days, the midseason or second-early varieties (M) in 100 to 105 days, the late or main-crop varieties (L) in 110 to 120 days.

1125 Break O'Day ☉

208 Cornell Early Savoy (New)

This is the Cabbage which obtained so much publicity under the caption "**Odorless Cabbage.**" Scientific pure line breeding over a number of years by Dr. C. H. Myers of Cornell University has caused much of the usual Cabbage odor to be removed from this variety. It is not entirely odorless, but almost so while cooking; remarkable for its mild, appetizing flavor. Of the crumpled leaved or Savoy type; round, medium-sized, light green, semi-pointed heads. Early maturing.

Pkt. 15¢; ¼ oz. 50¢; ½ oz. 95¢; oz. \$1.80.
